

CHECKLIST

Your five-step lighting plan for a room with no ceiling light

- ☐ Measure your room and note where furniture and available surfaces sit.

- ☐ Position one floor lamp in each corner or at opposite ends of the room for even ambient light.

- ☐ Add table lamps on side surfaces at different heights to spread brightness across the space.

- ☐ Identify your task areas and add focused light where you read, work or do detailed activities.

- ☐ Use uplighting in a corner to make the room feel taller and reduce shadows on upper walls.

- ☐ Choose all bulbs in the same colour temperature so the overall effect feels cohesive.

- ☐ Stagger lamp styles and shades so the room feels intentional rather than staged.

- ☐ Test your brightness by switching layers on and off independently until the balance feels right.
