CHECKLIST

Table Lamp Placement Checklist

- [ ] Identify every zone where you sit, work or read for more than a few minutes
- [ ] Place at least one lamp in or near each zone you use regularly
- [ ] Space lamps across different walls or in a triangle to avoid clustering on one side
- [ ] Check that lamp light overlaps slightly without leaving dark gaps between sources
- [ ] Pull lamps forward if they sit behind large furniture that blocks the light
- [ ] Mix lamp heights across the room to spread light at different levels
- [ ] Test your arrangement at night and move any lamp that leaves a zone too dim
