CHECKLIST

Water Ring Removal Checklist

- [ ] Identify whether the mark is white and cloudy or dark and deep
- [ ] Set the iron to low heat with no steam and use a clean cotton cloth
- [ ] Rub gently in the direction of the grain if using abrasives
- [ ] Wipe the area clean and inspect after each pass
- [ ] Stop as soon as the ring fades to avoid rubbing through the finish
- [ ] Wax or polish the entire surface to even out the sheen
- [ ] Keep coasters and a soft cloth nearby to prevent future rings
