CHECKLIST

Curtain control checklist: stopping fabric blowing in

- [ ] Try opening the window at the top instead of the bottom
- [ ] Fit tie-backs at two-thirds height to hold curtains clear of the breeze
- [ ] Place magnets on the sill and sew matching ones into the hem
- [ ] Tuck the curtain hem behind furniture or the radiator if layout allows
- [ ] Adjust casement stays or sash stops to limit how far the window opens
- [ ] Thread curtain chain through the hem for even weight distribution
- [ ] Test temporary weights before committing to permanent sewing
